DETAILED ACTION

Examiner's Amendment

- [01] An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
- [01a] Claims 21-34 & 36-46, previously withdrawn, are hereby cancelled.
- [02] Authorization for this examiner's amendment was given in a telephone interview with Mr. Guy Yonay on 9/19/08.

Reasons for Allowance

- [03] Claims 11-20, 35, & 47-48 are allowed. The following is an examiner's statement of reasons for allowance.
- [04] Claim 11 recites an "oblong capsule shape" consisting of a spherical imaging device and a detachable appendage. Figures 3A and 3B show such an arrangement. "Capsule" refers to the fact that the device is ingestible (specification, page 2, line 7); "oblong" refers to the fact that the device is longer than it is wide, which allows it to "progress along an axis of the lumen with little or no tumbling" (specification, page 1, line 32). American Heritage Dictionary (4th Ed, ©2000) refers to a capsule as something that encloses something else such as "a dose of an oral medicine," or "an organ" (in anatomy). As a verb, "capsuled" means "to enclose in or furnish with a capsule." In view of the specification and the dictionary, an "oblong capsule shape" is something which is longer than it is wide, and enclosed.

[05] Gross (2004/0253304) discloses an embodiment of a capsular medical device which has a detachable appendage that dissolves in vivo (see Figure 15). Prior to dissolution, the capsule appears to be cylindrical with rounded ends (see Figure 15), i.e. oblong. After dissolution, the capsule remains cylindrical with rounded ends, but gets shorter. Gross does not anticipate the independent claim for at least the following reasons: (a) the capsule in Figure 15 is not an imaging capsule with a dome-shaped window; (b) the capsule after dissolution is not spherical, as claimed, but capsular, as noted above.

[05a] With regard to (a), Gross discloses an imaging capsule in a separate embodiment (see Figure 30). However, Gross does not disclose that the imaging capsule comprises a dome-shaped window.

[05b] With regard to (b), Iddan (2003/0214580) discloses that imaging capsules may be spherically shaped ([0022]). However, there is no suggestion that a dome-shaped window of a spherical imaging capsule forms an end of an oblong capsule shape when conjoined with a detachable appendage.

[06] The combination of the two Gross embodiments with the Iddan disclosure do not show an imaging device having a substantially spherical housing with a dome-shaped window; wherein the window forms an end of the oblong capsule shaped formed by the housing and the detachable appendage.
